

Teaching Suggestions for Ski Instructors

TEACHING GAMES: Be motivated and positive. Little children tire easily, so balance activity with slow times. Keep your games and activities goal oriented and simple. Stop games and Activities when they reach a high level of excitement so they will want to do it again later. Learning is very difficult for some because they focus on their failures and shortcomings. Always point out the positive things they are learning. Children learn from doing and seeing. Keep them moving. Ski at their level and allow your imagination to keep them trying. Be fair, but allow everyone the opportunity to be successful. Ask for student input, but limit choices. Climb out of your adult mold and reach out to them.

CLASS RULES: To insure safety and fun use common sense. Follow and make sure your students know the Snow Sports Responsibility Code. Stop below each other and to the side of the run or trail. Take turns being first. Yell “wipe out” when someone falls. The whistle means stop. Be respectful in line. Ski poles are for responsible people. Carry them correctly and keep them away from other people. You will have your own rules to suit your style of teaching.

THE UNDISCIPLINED CHILD: Try giving them responsibility or a task, teacher helper, ski patrol, ect.... If they don't respond after numerous attempts, take them back to the program supervisor and have them “benched” for one run. You are not a babysitter. Be honest with them and their parents. They know what they are doing.

FINISH CLASS WITH HIGH SPIRITS: Use the last few minutes of the class to generate tremendous enthusiasm. Use a game, activity, challenge, contest, song, chant something in which your students are totally enjoying themselves. If they don't want to leave the class you have done a very good job in motivating and showing interest in them.
